

EduVoice

An AI voice agent that calls parents in Telugu — automatically.

Fee reminders · Progress updates · Complaint collection

Product Overview & How It Works

Prepared by VCD AI Labs

What is EduVoice?

EduVoice is a cloud software platform that lets a private school **automatically phone every parent in Telugu** — without a human dialling a single number. A school admin uploads their students from Excel, clicks *Launch Campaign*, and the system calls hundreds of parents one by one. The AI speaks naturally in Telugu, listens to the parent's reply, understands it, and records the outcome on a live dashboard.

It is built for private schools across **Andhra Pradesh and Telangana**. Each school is a separate **tenant** — its own web address, logo, colours, phone number and data, fully isolated from every other school on the platform.

3 Call types	11AM–6PM Legal calling window	Telugu+Urdu Languages	Multi-tenant Architecture
------------------------------------	---	---	---

The three jobs it does

01 Fee Reminders Calls parents about pending fees, then auto-sends a UPI payment link on WhatsApp so they can pay instantly.	02 Progress Updates Reads out the student's marks, grade and attendance to the parent in friendly Telugu.
03 Complaint Collection Listens to parent complaints during the call, categorises them, and files them on a kanban board.	04 Attendance Alerts Automatically rings parents of students whose attendance has dropped below the school's threshold.

How a single call works

When a campaign runs, every parent call flows through this pipeline. Each step is a specialised service; EduVoice orchestrates them and saves the result.

In plain words: the dashboard tells the backend who to call. The backend checks it is legal to call (right time, not on Do-Not-Call, not already called today), then asks Vapi to dial. ElevenLabs gives the AI a Telugu voice; Deepgram turns the parent's speech into text; Claude reads that text to decide what happened — did they agree to pay, raise a complaint, or ask to be left alone? Finally the system acts: it WhatsApps a payment link, files a complaint, or schedules a retry — and the parent gets a tidy summary on WhatsApp.

One platform, many schools

EduVoice is **multi-tenant**. The same software serves every school, but each school only ever sees its own data. A query for Sri Vidya School can never return Bhashyam School's students — isolation is enforced on every single database call.

Built to stay on the right side of the law

India's telecom regulator (TRAI) has strict rules for automated calls. EduVoice was designed around them so a school can never accidentally break the law:

- **Calling window.** Calls only run 11 AM – 6 PM IST. A campaign scheduled outside this window is rejected; one that is mid-run auto-pauses at 6 PM and resumes next morning.
- **AI disclosure.** Every call opens by telling the parent it is an automated AI call and that the call is being recorded — within the first 15 seconds.
- **Opt-out.** The parent can press 9 (or just say 'stop calling') to be added to a Do-Not-Call list. Future campaigns skip them automatically.
- **DND scrub.** Before each batch, numbers are checked against the national Do-Not-Disturb registry.

What makes it production-ready

Beyond placing calls, EduVoice handles all the messy realities of calling thousands of parents on Indian mobile networks. These were built in six phases:

Phase 1	Legal & Compliance Calling-window enforcement, AI disclosure, recording consent, press-9 opt-out, Do-Not-Call list, fee-extension flag.
Phase 2	Call Reliability Voicemail detection + voicemail drop, automatic retries (max 2, 2-hour gap), duplicate guard, wave-based dialling (30 calls per wave) to avoid carrier spam blocks.
Phase 3	Telugu Language Quality Separate Telangana vs Andhra dialect voices, 40+ boosted domain words, mid-sentence Telugu+English code-switching, escalation to human staff when the parent is angry or unclear.
Phase 4	Payment Intelligence UPI payment links sent on WhatsApp, fee-extension handling, dispute flag that pauses reminders, partial-payment tracking.
Phase 5	Parent Self-Service A mobile parent portal: log in with phone + OTP to see fees, marks, attendance and recent calls — and pay by UPI.
Phase 6	Robustness & Operations TRAI DND scrubbing, carrier-health monitoring per phone number, Urdu support for Urdu-medium sections, attendance-alert campaigns, weak-network handling.

The technology under the hood

Backend	.NET 9 · Clean Architecture (Domain / Application / Infrastructure / API) · PostgreSQL · Entity Framework Core
Frontend	Angular 22 · Bootstrap 5 · premium white-label design system · ApexCharts dashboards
Voice & AI	Vapi.ai (call orchestration) · ElevenLabs (Telugu voice) · Deepgram (speech-to-text) · Claude (understanding)
Messaging	Twilio (phone numbers + WhatsApp) · SendGrid (email) · n8n (automation workflows)
